

Week 6 Case Study: GlobalFin Services

GlobalFin Services is a multinational financial services company with over 12,000 employees across the United States. As part of its digital transformation journey, the company has been steadily adopting ServiceNow to streamline enterprise processes across IT, HR, Facilities, and Procurement.

While leadership is enthusiastic about these investments, the employee adoption rate has been inconsistent, and complaints about day-to-day usability are growing louder.

Challenges faced by IT analysts:

- Lacking a central location to track assigned cases and tickets
- Lacking visibility into due dates and SLAs to prioritize work
- Toggling frequently between multiple pages to access information
- Struggling to review all tickets related to a user easily

Challenges faced by employees:

- Struggling to find needed information, such as service requests
- Lacking an intuitive option to track the status of open requests
- Finding knowledge articles difficult to browse
- Lacking a single pane to review assigned tasks and submitted tickets

In this scenario, the role of the Certified Technical Architect (CTA) is to understand users' needs by analyzing these pain points. This analysis will uncover key user experience insights and highlight areas for improvement.

CTA focus areas

Based on these insights, you will complete the following tasks:

- Create a workspace mockup leveraging the Now Experience Framework to address UX challenges faced by IT analysts.
- Create a Service Portal homepage mockup leveraging portal tools to improve self-service and address the UX challenges faced by employees.
